Speakout.

Talking add-on for Milestone 311.

Let the tag speak to you

Speakout is a small hardware add-on for Milestone 311 to record your own short or detailed description to tags. Be it food, files, medical drugs, bottles or frozen food - a small tag on an item helps to identify it by playing back the notation you previously put on it. Dedicated tags for CD's are also included. Speakout is based on the RFID technology (Radio Frequency Identification).

The next 3 lines of text are the instruction manual

Keep the play button of Milestone 311 pressed to seek tags. They are being announced when found. Now press record to associate a voice message to it. Now seek the tag again. When it is found you hear your voice from the previous record. You can playback and re-record your tags as many times as you want. Period.

Want to read more tags?

Messages to individual tags, e.g., tags placed at public places such as bus stops, museums or buildings, can easily be downloaded to your personal unit. Also, you can copy your individual tag notes to the Milestone of your colleague, let's say to share tag information in an office efficiently.

Ask your distributor for further information. Have fun with Milestone 311 and Speakout!
